Domestic Operations

The Company pursued the objective of sustained cash flows as evidenced by healthy EBIDTA in all main businesses. Captive consumption of power ably supplemented by sustained production /conversion and sale of ferro alloys in both the units continues to be the main stay for revenues and profit in standalone financials. Trade war between USA and China, weakening of Chinese currency and domestic slowdown adversely impacted the Steel sector, exerting pressure on margins for ferro alloys though off-takes pose little problem. Merchant sale of power had the benefit of bilateral contract for only a month during the quarter following which the sales were through IEX at relative lower realisations. Sugar business continues to be marginal and volatile, contributing little to the profit for Q1 FY 2020. Cash flow from O& M operations in Zambian power plant continued to be stable and formed major part of other operating income in Q1.

Overseas Operations

Operations of both Coal Mining and 300 MW Power Plant in Zambia were on track for Q1, both contributing handsomely to the revenues and profit at consolidated level. Notwithstanding planned outage of the power plant and period end adjustment for MTM loss on hedging contracts, the operations fetched above par revenues and profit than budgeted.

The Company has decided to suspend the project activity at the Zambian Sugar project pending clarity of time lines for infrastructure development by the Government and re-evaluate options at an appropriate time in future.

The Health care Enabled services in Malaysia and Singapore have progressed qualitatively and revenue ramp up is expected over a year or two, following intensive market development on the ground.
